

Enpal | Termin für Dein Interview | Data Engineering Lead@June 17, 2026 1:41 PM

🕒 Created time	June 17, 2026 1:41 PM
🕒 Last edited time	June 22, 2026 9:38 AM

Notes

- This was a positive screening: the recruiter said the role is a **lead, hands-on player-coach** job, not a pure people-manager role.
- Metrify is **small but growing**, with about **4 data people** today and a need for someone to create a more centralized data vision and analytical foundation.
- The biggest gap between your expectation and the role was **people management**: she said the team already works fairly independently, so mentoring is not the main focus; **bringing structure to chaos** is.
- The org is intentionally **low-hierarchy**; reporting is a bit fuzzy today, and they want to reduce everyone reporting to everyone.
- Current setup sounds like **1 data engineer, 2 analytics engineers, and 1 technical PM**, with leadership sitting across the CTO, engineering manager, and PM.
- The hiring manager is **Marcus, the CTO**, currently on parental leave, but he will join later-stage interviews.
- The process is: recruiter review → technical chat with a lead analytics engineer from another Enpal unit → **5-day case study** → on-site/team presentation at Metrify → final CTO chat.
- They expect a **hybrid** setup; the team is usually in office **3–4 days a week**.
- Salary guidance was **95k–105k**, which the recruiter said fits your stated staff-level expectation.

- Your strongest positioning for this role is: **hands-on data leader who brings structure, owns messy systems, and can align business + tech in a greenfield startup environment.**

Appendix

I think that's Yes, I can see you well, hear you well.

Nice to meet you.

Nice to meet you, Jimmy. Thank you for waiting. I'm a little late. Um, I come from an old hands. It's still happening right now, so our CEO was a little bit um yeah, taking longer than usual, but um thanks for waiting. Appreciate that.

And thank you for your time for talking to me today.

Hopefully Yeah, I do like the weather is getting better so which is nice. Um, you also you are in Berlin, right?

Correct. Personally, I'm having a lot of days and a bit perfect. These days getting over the weekend because like like regarding the sleeping condition, I mean it's very hot so it is very warm in our house when it's too hot. Um but we'll see.

Um I live in a house but I do live in a house not directly in Berlin.

Um so we bought a home here. Yes.

It's nice a little bit more nature know. I enjoy that in my free time and then working in the the big city, you know.

Yeah, that would be amazing choice for me. I would love to have it and especially if I have a balcony or even a small garden. It would be amazing.

Yeah, it's nice. It's really nice. Especially in summer. I mean, it's a lot of work, but you know, I start my day with going in the garden and watering all the plants, having my coffee, and you know, just like that routine is very and very privileged as like I can't train here.

I have a dog as well.

That's also power. Um yeah. All right then. Let's talk a little bit more about this role today. I think um yeah mainly here to tell you more about it about Yeah. the we're looking for but also to hear more about your experiences your expectations. Um I do have a few HR related questions to see if that also

matches. Um but it will be quite casual for today.

Sure. I mean I'm already familiar with the

All right. So you know already um have you heard have you ever heard about Metri beforehand?

So I guess it's a rather new product. because I also saw a couple different and this is the first time I see this name. So I get this new product and as far as I understand from my research materite new last year. So, Metric Metriy itself is still quite um small. Um but it is growing. We do have a lot of openings currently and um there's definitely room for more. I think what's nice about this company is that you will sit in the Empire campus. You will have the backend support of Empire, meaning you can also have the knowledge sharing with the data team from from the huge company, but you interact in a very small environment. So, definitely more in a green field space for you. Um looking for a person who likes to wear many hats. Um so currently um to give more details, we do have around four data people working at Metrify, but we need someone who can guide them a little bit who can um create a more centralized data vision there. Um but also to you know um create the analytical foundation and being also working along the business side of things and I need um so I think that is the most important um task what you have to do um since it is a startup it's very like creative very ambitious and driven and there's a lot of um room to you know enhance things so there's not a clear path it's very like you can do it you just need to do it somehow you know phase we are in right now and I think like either you like that you want to tackle the challenge or you were just like not interested in that. I know and I'm very much into that and especially my previous experience especially I in the midst of chaos in the middle of it means the team was under a lot of pressure to serve and they had to data assets and dashboard whatever they do they fast and the quality and the reliability also scalability plus compromise it um so I hear a pretty messy data stack while um the stakeholder especially for the executive level or co they have been making decision based on data they trust which I think they are they don't trust it for reasons as well so um but yeah I would say I say I thrive in this kind of environment and uh and also I have a real experience in that kind of chaotic experience and order to long story short no matter when it comes because that is a prerequisite of having to make sure the most important things that we're not just who is allow us and and what if you ask any um and also to high volume and uh yeah I hear it and I also got a bit lucky the product side also was in the middle of building a

completist for transportation which was one of the one of the quality problem. So I just leverage that without asking permission I was just I just initiative work directly ask for and understand the whole structure and have of this operationally. So I rebuild the whole pipeline with a very robust table that's later became the top most useful and most data and I also remember a very nice positive positive feedback probably the only positive feedback ever being said by that And that guy was from from Amazon by the way. And u so yeah I mean he he said he was the first time he saw some assets that is so robust and very trustworthy during the I kind of environment and I also know myself I yeah I enjoy in that kind of environment and I also like to in this kind of stock that don't need to worry too much about usually.

All right. And you left the last company you left it this year in January, right? Correct.

Um and right now you, you know, what are your expectations on your next role? What are you focused on? What what kind of is your perfect role.

So, uh my uh to be completely honest with you, my ideal scenario, my ideal next role would actually be leadership role. But I would say because of the situation of the company for more than half year drastic off the So reason why I still enjoy myself for more leadership and potentially mentoring role And while I get my build and set up for the rest and uh more importantly what I learned about myself is that I also enjoy a lot of the business which was something I miss. fairly overwhelmed. That did not function to really go shoulder by um so yeah this was something something All right. Um, from your last stage, could you tell me a little bit more about the team set up there? Like how many people were empty like what kind of positions regarding my previous position?

So in my previous positions, my direct reports went up to uh three direct reports and uh the whole team was around 10 And if we include the other analysis and also data scientists etc that will be adding up to 30 and if you want to learn more as well. established.

So in the last station it was more there was a whole team of analytics engineers and you were working in one team. Okay, I see. All right. Um yeah, here the structure looks a little different but of course you I guess you were zoomed up because it's very very small. Um so we do have data engineer, one data engineer, we have two data analytics engineer, you know they're doing a bit of everything and we also have one um technical PM who's right now guiding them a little bit. So he is in charge mainly and this is how the the setup right

now looks like.

Um do you have a question or

I have two questions actually um because when I'm looking at the the JD and also the automated generated email from Microsoft team as well so the title of this JD says meet more like it and then for some reason probably whatever they automatically generate email from the engineer manager. So is this or is this manager?

Um so let me explain. Um it is called like it has different name because um we have a new ATS and some things are still like not running so smoothly and was mainly um first written out of the data engineering lead role um but changed to the analytics engineer lead role because we need someone there. Um so this was what's coming from business side but then talking about it from the tech perspective with the recruitment team and you know um um we figured out that's not the right title

and this role is mix you know hands and like guiding the other people but the scenario right now looks like that the are in the teams already the day channel analysts they're really much work of their own since last year

so they kind of fought their way through that right so I don't think like mentoring leading them will be a super huge part of this role

I think the more over huge part would be clearing everything bringing structure in the chaos like working on the business and meantime bringing the people closer to a centralized team and showing up as a respected leader you know to to show them how to do things to bring more structure into that. I think that will be the main focus for for now.

So does it mean this role would have those people reporting to this person or how does the report?

Right now it's more over that they're reporting either to the engineering manager who will report to the CTO or to the PM. So it's really like not a lot of hierarchy and what the CTO wants to move away that you know you you were there as a person like who is reporting to everyone so not everyone like the signal I see like you know reporting things over and over again

okay

that makes more

sure this would also be the

so yeah neither be the nor yet something need to be clarified

I mean sense Let's move on. Let's move on.

Let's move on. Maybe you would like think about it again. But in the meantime, I can tell you a little bit more about the process.

Um, so what usually it looks like that, but I will share my notes and your CV with a team. And if they're interested in talking to you, then um I will invite you to the next which would be a technical wedding with one of our lead analytics engineer from a different entity though. So she works for EMPA or for heat as well sometimes and um you will talk to her because in metric like those people there they won't be mature enough to like test your skills therefore we get support from the other team. So you will talk to her and she's basically I think it's a good um conversation about what she's doing because basically the same just for metric. Um and after that conversation there will be one case study. Um for that case study you have five days to work on it. Um I will of course ask you before that. I'm not just sending it out of the blue to you. Um so whenever you have time you can work on it and then you send it back to us. Um and then the last steps is basically getting to know metric via the team. Um so we would most likely invite you to the office um where you have to present your case, where you're meeting the metric team, where you're meeting the data people from the team and um then you can also see if that is a match. There's one tiny conversation in the end with our CTO Marco um which most likely will be online because he is still on parental leave um until like July most likely. Um it depends how fast we are with the process. So either he's going to be in the office as well, we have to Um and this is how everything will work like um I do have one more a few more questions from the HR perspective. Um one question would be um the the office situation like do you enjoy going to the office like what is your preferred model?

My preferred model would actually be a hybrid one because while I enjoy establishing relationship with my stakeholder the easiest to do in person. I would also love to have some working from home to stay really focused if I do. So I mean my my personal um model that would be ideally yeah I think like that also works well. So the metric team usually is in your office three or four days a week and then the rest and And I think that's also that would work along with your expectations as well. Um and um when would you start like as soon as possible or as soon as possible? Um I mean because currently I don't have ongoing job anyway and I'm so

And what would be your expectation? Um usually I I would answer this question based on the job and but this role as we have discussed as a data engineering

manager and then becomes an engineer so I'm not sure it's not senior level yeah I would like when it comes to salary wise I would more go for staff level like not for senior I think but like more like the duties you have to do.

Okay. So for staff I see in data I would say um yes um that work that's also our budget. So this like 95k to 100 105 So, this shouldn't be an issue. Um, so there's also room for negotiation, but it's definitely in that range. Um, all right. Um, cool. I think I have everything from my answer. So, as I said, I will share everything with the team and then let you know um latest um by Friday. This Friday and um yeah, do you have any other questions left so far?

Yes. You tell me a bit more. First of all, who's the hiring manager? You mention either going or the so

so the hiring manager is Marcus that is the um the CTO I can also like um write the name in the chat so you can check check his profile um and that is the CTO of Metrofi and he's also the the hiring manager Yeah, but he's out of, you know, out of office for like at least a month since the parents are leave, but he's taking the time like if we have like the final interviews, like he will um take his time to talk to the to the candidates

because I actually came to the office for one of your colleague But he departs from from and joined a lab to be the solution engineer there.

But not Alex movie like the head of data. No

Alex would be if my memor is correct Alex is probably the data architect because I have been the listening to the pretty interesting part. Interesting. Yeah, it's cool that you say that because like a lot of people I talked to have been to that meeting or like to meetings like I feel like the data team and BI team at Nanbury like they're doing a lot of stuff when it comes to that like um showing up events but it was like a few years ago already like one and a half years ago. No, it was recent.

No, actually soh was doing which is great by the way you guys doing that because you have a rather nice office and you have a big place to host and yeah I was there and I also went to another meetup but that one is no and other you know another company and other from I don't know which exact but he also did about the whole aritecture of I would say I know a few people that's cool we do have a new office though I'm not sure you probably been to the old one but the new one is quite similar it's like just bigger it is at o k it's basically a campus before it was at o but it is I would say just better you know more like it just updated more space and place for everyone. Um, yeah,

it's not so far. I mean, I probably went to the not before. Yeah, it's close, so doesn't really matter. Um, but it's cool that um, yeah, you have some like contact with already. Um, And um yeah, we'll see like see about the next steps.

Cool. Um I mean I don't think I have a lot of questions actually because I I have already

um nothing from my share everything now and then we can see from there. Um and Wish you a wonderful week ahead. Enjoy the weather. Have a good sleep.

Leave me room and we talk to each other.

Thank you. And have a good one. Bye. Bye.
